Daily Construction Site Report

PROJECT	REPORT DATE	REPORT ID	STATUS
Webhook	11/12/2025	24f4b332	PROCESSING
Email HTML			
Test			

Works Summary

Webhook payload and email HTML generation test

Administrative validation of the complete webhook payload and automated email HTML rendering, including embedding base64 client logo and TradeEase AI branding assets. No physical construction works executed; entries populated to validate reporting fields.

Key Activities:

- End-to-end webhook payload generation and transmission test
- Email HTML rendering verification with base64-encoded logo and branding
- Field mapping checks for workforce, plant, materials, delays, and safety
- Compliance references reviewed against VicRoads Standard Documents for reporting format consistency

Workforce

7

Total Workers

8

Total Hours

56

Man Hours

Works Performed

Testing the complete webhook payload with email HTML generation. This includes base64 encoded client logo and TradeEase AI branding.

Materials Used

MATERIAL	QUANTITY	UNIT
Concrete	300	bags
Steel rebar 12 mm	50	pieces
Bricks	100	pcs

Plant & Equipment

- Excavator CAT 320
- Concrete mixer CM-500
- Forklift FL-200

Safety & Incidents

Safety Observations:

No incidents reported. All personnel observed wearing appropriate PPE.

Next Day Plan

- Finalize webhook-to-report field mapping and regression testing
- Confirm email HTML template styling across clients and devices
- Validate embedded image assets (base64 and hosted) and alt text
- Issue test report for internal QA sign-off in line with VicRoads documentation standards
- Prepare rollout plan and monitoring for production deployment
